PRODUCT BULLETIN

Product(s):	Julian
Bulletin Number:	085
Release Date:	10/20/99
Pages:	1

Subject: Extended base - Julian

The extended base for the Julian increases the load capacity for the unit. This allows additional monitoring to be mounted on the machine.

The extended base will be standard on all future Julian orders and has been added to the Julian base unit structure. Units currently in the U.S. will be upgraded with the extended base.

The additional cost of the extended base means that the base price for the Julian has been increased. Refer to the latest Julian price list 8/99 or later.

If there are questions concerning this bulletin, contact Rob Clark at ext. 2264.
